

TA248 Sound Design – Fall 2013

Project 2 -- Sound and Image

Find three images that "speak" to you. The images should be recognized works of art with general appeal not images of a personal significance. (That is a picture from a recent vacation.) The images can be computer files that can be projected (JPG files on a jump drive) or hard copy that can be placed on the document projector so the class can see them during the presentation.

As with Project 1 - translate the visual images into sound.

Each selection should be edited to no longer than 0:30 in length. Shorter may be better. Use the time you need for the communication but do not exceed the limit.

The project should be converted to MP3 and uploaded to Tegrity for presentation. (Hopefully it will work this time, if not we will use the jump drive method. I will update you as we get closer to the due date.)

A brief statement (approximately 1 to 2 pages) describing your goals for the project and the techniques used to achieve them is required. The statement can be uploaded to Blackboard or a hardcopy can be turned in on the day of the presentation

Due: October 7
